

ABSTRACT OF THE DISCLOSURE

A push-type information providing service, wherein a request for setting management information as to information service to a mobile terminal 2 is
5 issued from a service management node 4 for managing a visit location of the mobile terminal to a gateway when the location of the mobile terminal is registered in a mobile packet communication network 12. The
gateway 3 requests a push server 1 to start the
10 information service as necessary, and selectively transfers a service information packet received from the push server to the mobile terminal 2.
